

Tattie Planting Gadget

Bought this to plant tatties under membrane. Yellow button opens and releases soil.

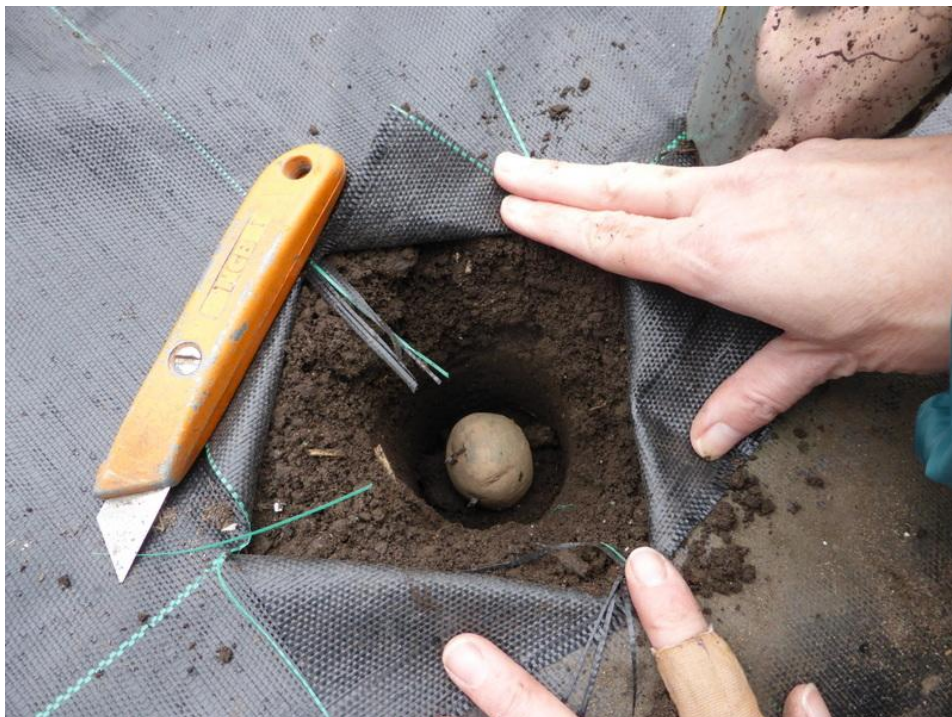

Place in position press in yellow button to open slightly.

Press down and rotate to required depth

Lift out with soil

Place tattie in nice clean hole

Press yellow button to release soil then drop soil back in place.

Pros

Easy to use on good dry soil

Good clean hole cut

Does not compact soil like a dibber

Easier to add other things like fertiliser

Works great under membrane

Cons

Price £7.99 (maybe cheaper versions)

Soil needs to be pushed out with dibber if very wet/sticky

Overall excellent little toy for use when planting under membrane.

Cheers
