

Tried this idea off the TV and it works perfectly.

Acquire a 4" plastic drain pipe, place comfrey leaves in it, secure mesh at one end, mount vertically in a sunny position. Place a container under bottom. Place water filled Pop bottle with string attached in top as weight.

Within a week the Comfrey concentrate will flow.

This method can also be used as a filter for Rhubarb concentrate against White Fly, it stops your watering can from blocking up so frequently.
